

Just Takes 2 - Benjamin Biggs Border Scallop Placement

*The finished width of your border is 10".
The length of the strip shown is 80" (top border)*

I think you can see how the swags are positioned across the top border strip of the quilt. When laying the corner piece into the 6.25" area at the end of the strip, I had about 1/2" of open space to work with before I hit the diagonal line where the sides intersect. *The angle you position your corners will effect how much open area you'll have.* You could elongate the swag piece or position the three red petals to cover the 1/2" area.

You usually resolve a difference in an applique or quilting design on a border within the side pieces but I didn't find it necessary in this case. Your pattern swag should measure 7 1/2" wide when printed. If you have a different measurement check your printer settings.
